ESSAY [The] on external appended remedies, occasioned by the very great increase of late years in the bills of mortality, which plainly shew that in and about London only above 12,000 children yearly die of their teeth and convulsion and feavers caused thereby; also that great numbers of women are lost in child-bed; and multitudes of persons die of distempers of the head. In this essay, therefore, is clearly proved from the principles of the new philosophy that by the wearing only of a certain anodyne necklace approved of and recommended to the world by Dr. Chamberlaine, children will easily breed, and presently cut their teeth without any pain, [etc.]. 6. ed. 16°. *London*, [1716?].
